

1. Introduction

- Building My Netflix Backlogger app that has the netflix database api to let you add or remove items and track completed or currently watching from Your List.

2. User Interface Design and Prototype

- <https://wireframe.cc/U2aQrv>
- The Home Page UI will mimic Netflix so users are already familiar with what to expect..
- The TV Shows and Movies tabs will just be an input that users can search and filter to make it as simple as possible to use.
- My List will be your backlog list where you can change as you like.

3. Navigation Structure

- Home page will just be a hero preview of highlighted title with carousel of other items on My List.
- Navbar fixed to top with routing to each page as necessary.

4. References

- Netflix
- MyAnimeList
